Rainbow Islands

OCEAN converted the beautiful game from TAITO for the 64. The music is really nice and attractive, it's the same style than bubble bobble and a bit Giana Sister. The graphix are original, funny, superb, colourful and detailed. The move in the screen are original and attractive. Contrarily to the rumours this game is not really identical with bubble bobble but it looks more like a remix from bubble bobble and Giana Sister. The first difference between bubble bobble and Rainbow islands is that here you must not kill all the enemy but reach the end of each levels. What is too bad is that in the two players mode there is only one player at the time in the screen. They could also do a map like in the AMIGA version. About the game there are two ends and if you finish the game in the bad end you must start back all the game.

**This was make by ALTERNATIVE SOFTWARE
The graphix and the sound are stupid but funny.
During the seven levels the same screens are repeated
Only the end of each levels change.
In the game, you are a engine and your mission is to
take a waggon and bring it to the station.
On your way you will find some *Bonus* and some
station, if you pass in those stations you will have
some bonus. The *obstacle* are :**

- **The others engines.**
- **The boulders.**
- **The trees.**
- **The broken ways.**

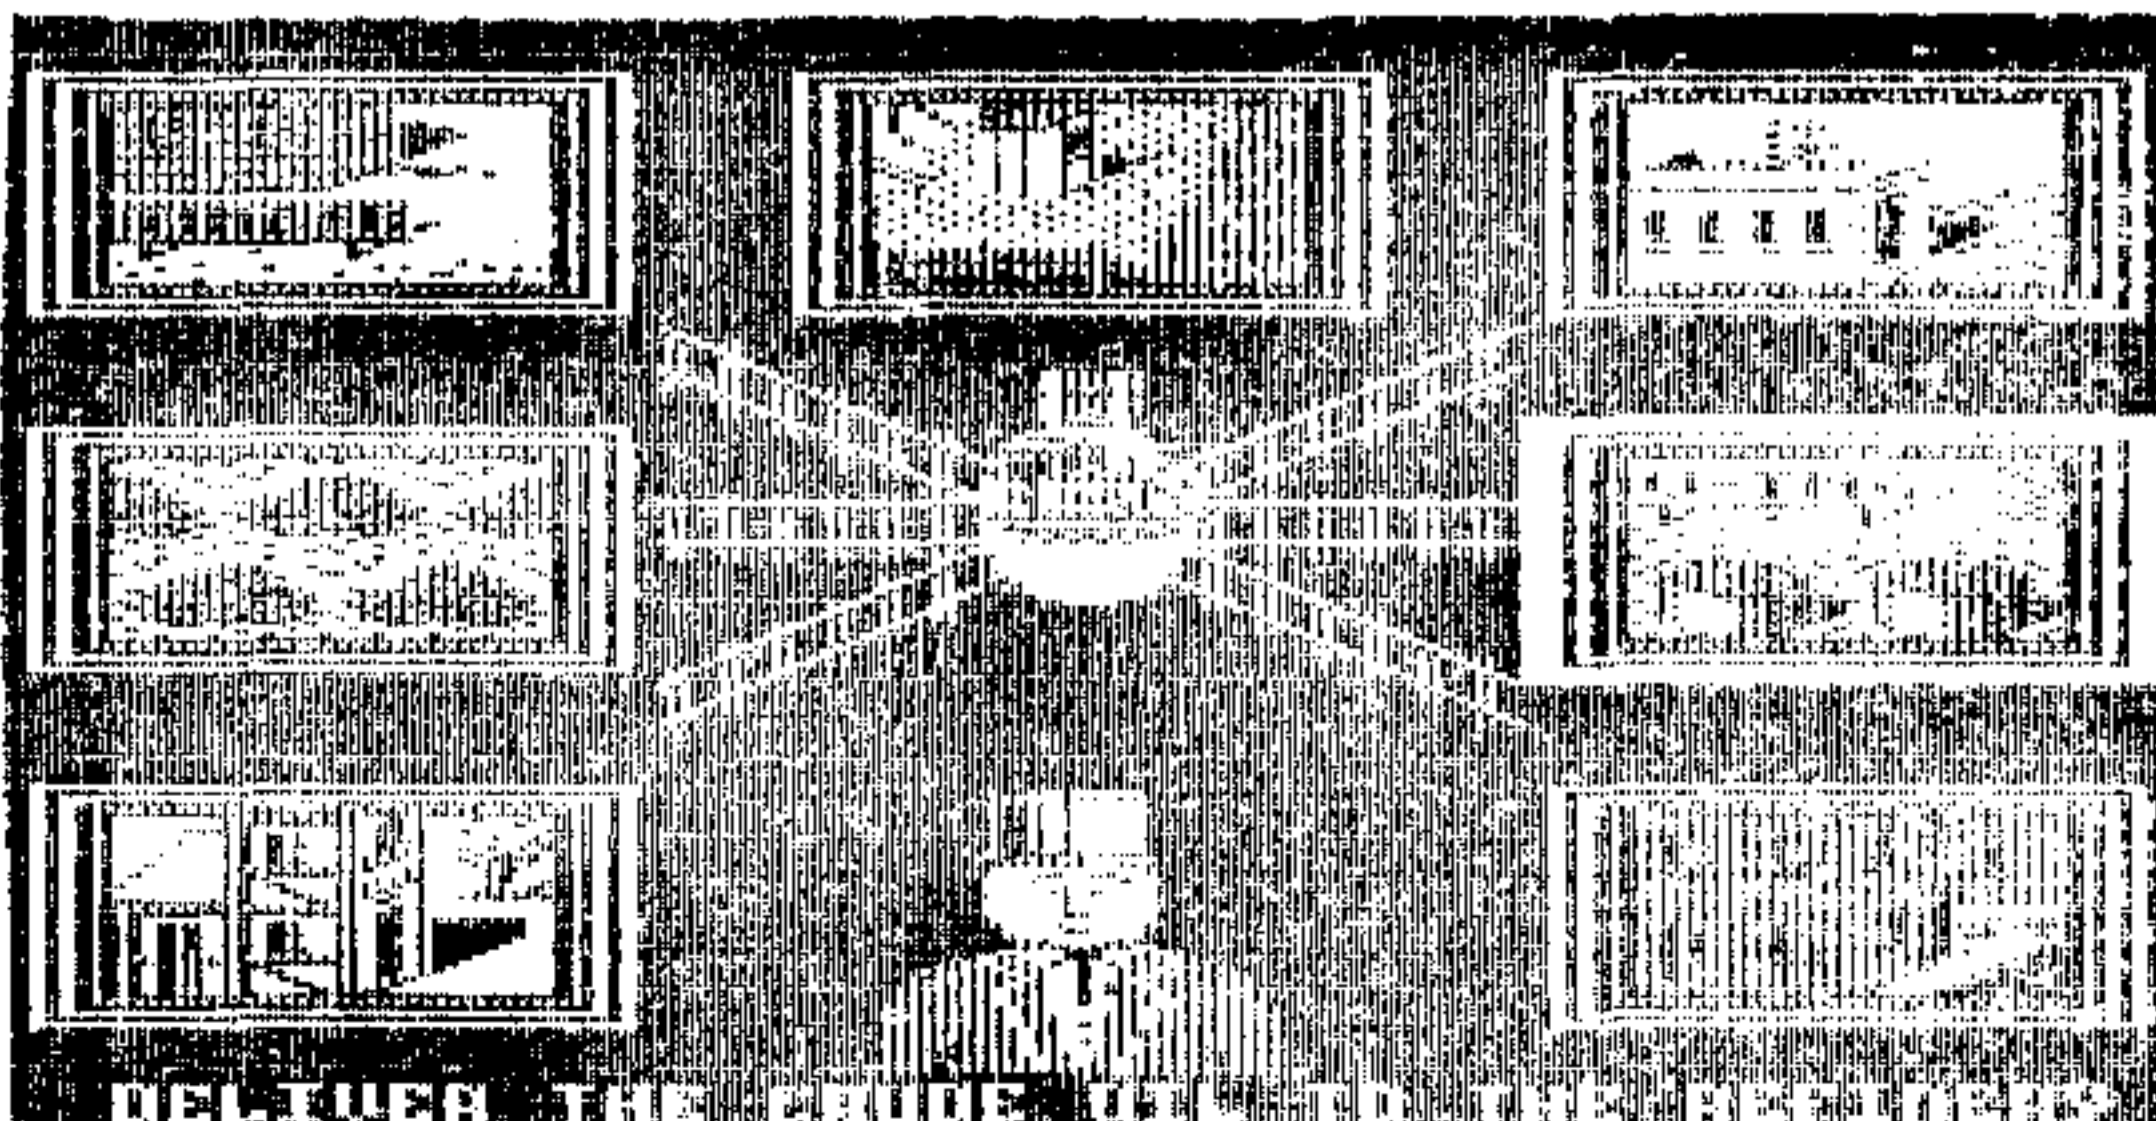

**On the bottom of the screen a little SUN shows you
the time left. You must be in the station before the
night. The picture on this page is the levels menu.**

GAMES PREVIEWS

IMPOSSAMOLE

Gremlin brings us again the old and famous MONTY MOLE in new adventure. The style of the game should be the same as the old ones. The factory want to exploit M.M. at the maximum with a comic strip, they want to beat the well known MARIO BROS and for that they're going to do TV series, cereal, wallpaper etc about MONTY MOLE. Let's hope they don't forget to make a good computer game in the meantime.

WORLD CUP SOCCER'90

Again a soccer game for your computer. This time Virgin makes a 3-D soccer. The graphics aren't very nice but this time there's a scanner on the right of the screen (what was missing on KICK-04K). Don't buy this game except if you really like the soccer games.

NINJA SPIRIT

This is another slash-em up game done by Activision. The sprites are little but very detailed and the animation is good. The finished version should come out at the end of this month.

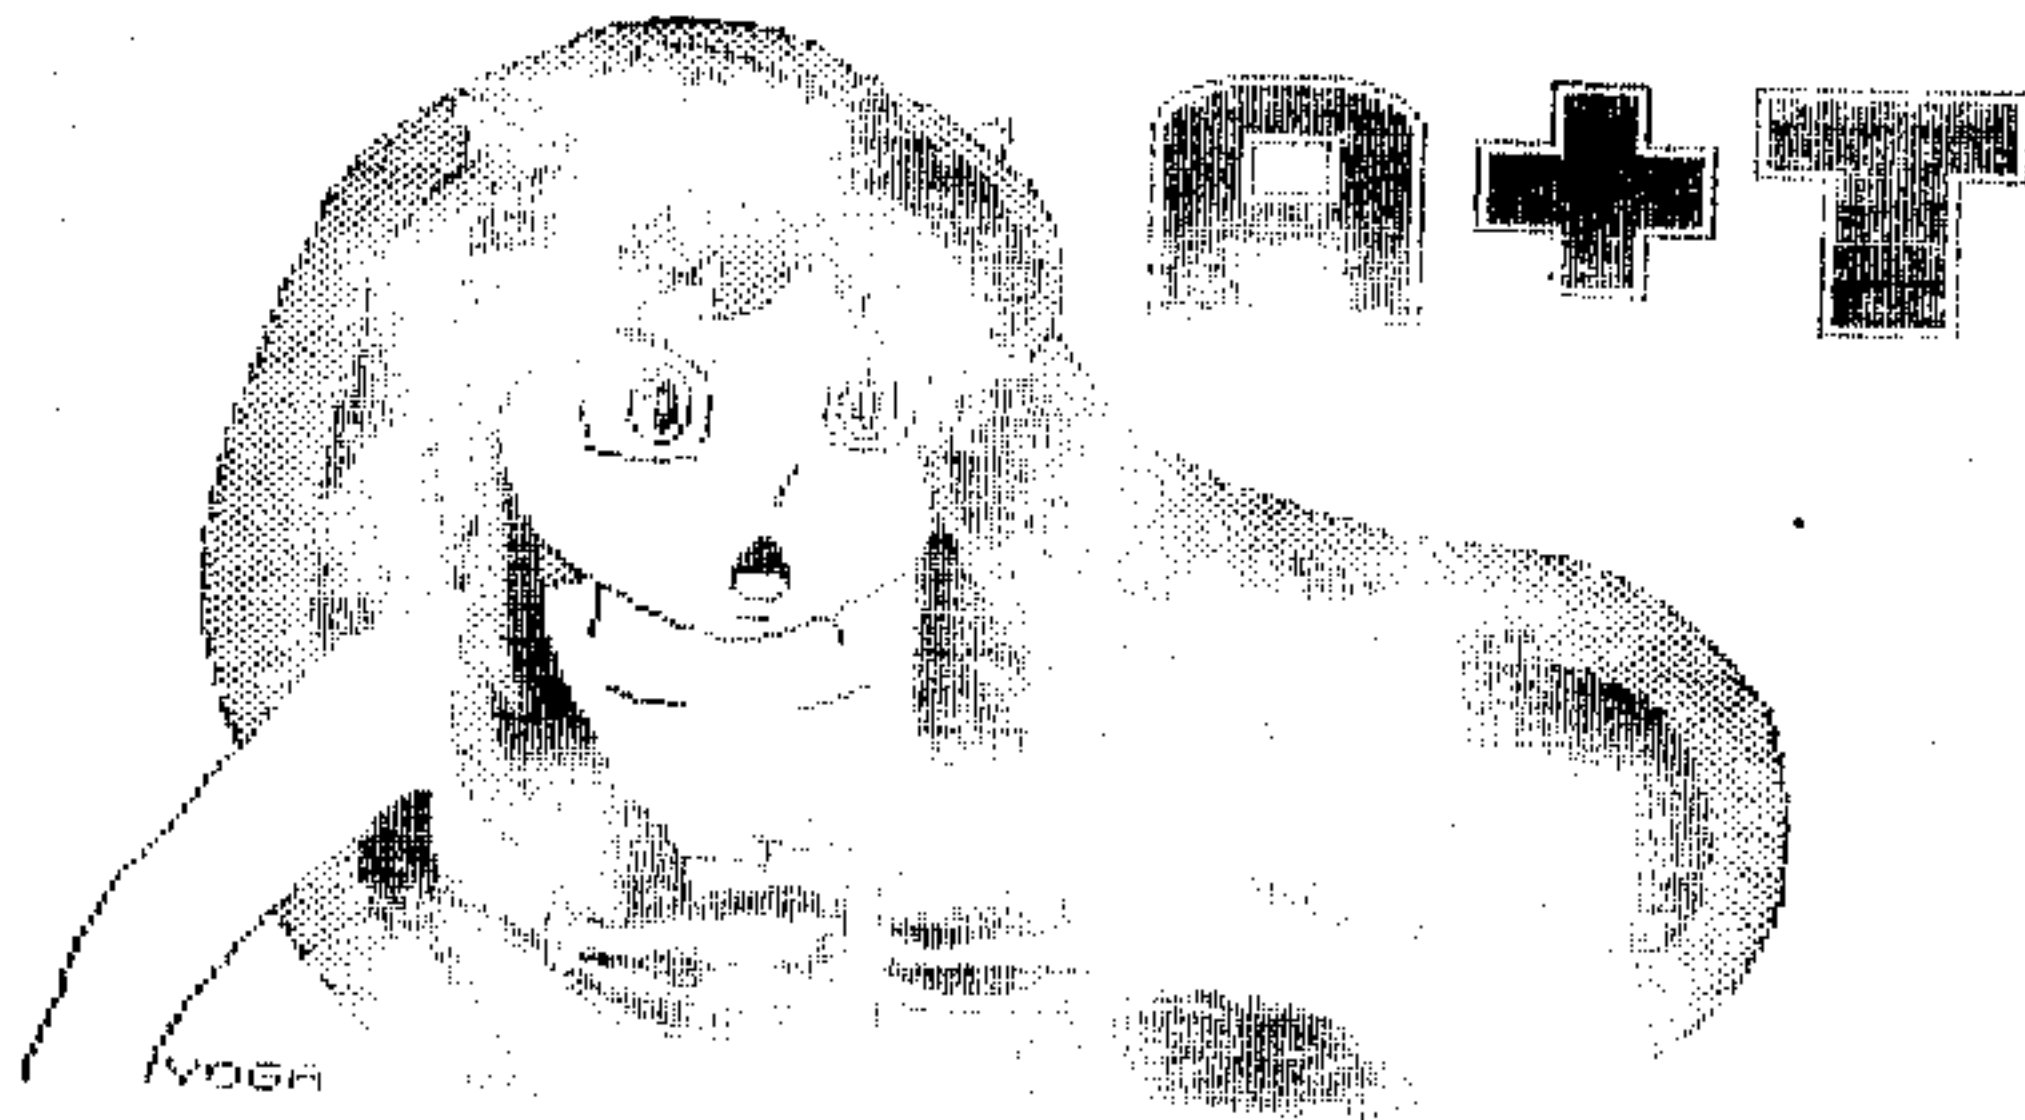

# Graphist of the month

The graphist of the month is : **Y@ga** .

When he started his carrier on the computer he was a coder and he went in a few groups (**The Blue Thunder** , **Arcade** , **Yankees** and some others little groups) but now he want to be only a graphiste . He is able to become one of the **BEST** because he has the talent to do that and he likes it .

I think his graphix are from a good quality , some of them are printed on the bottom from this page .

This is all for this time but don't forget that the next time it is you who will have to choose your favourit graphist (look the rankings page) .

**NEWS**

# Techno news : The cd on 64

\*\*\*\*\*

The famous game factory **CODEMASTERS** has recently produce a pack who contain 30 games on a **CD** . The more famous are : - INDOOR SPORT - STREET SOCCER - GRAND PRIX SIMULATOR ... and many other .

It contains also a disk ( or a cassette ) with a software that will allow your 64 to load those games .

**How to procede ?** It's very simple : you just have to plug your 64 on a standart CD player ( with the cable in the pack ) from the port two until the Headphone Socket . You must turn on the CD and find the good frequency ( volume ) . There's a programme for it on the first track . To load a game just use the soft .

Select the good track then press play ( it's so simple ) .

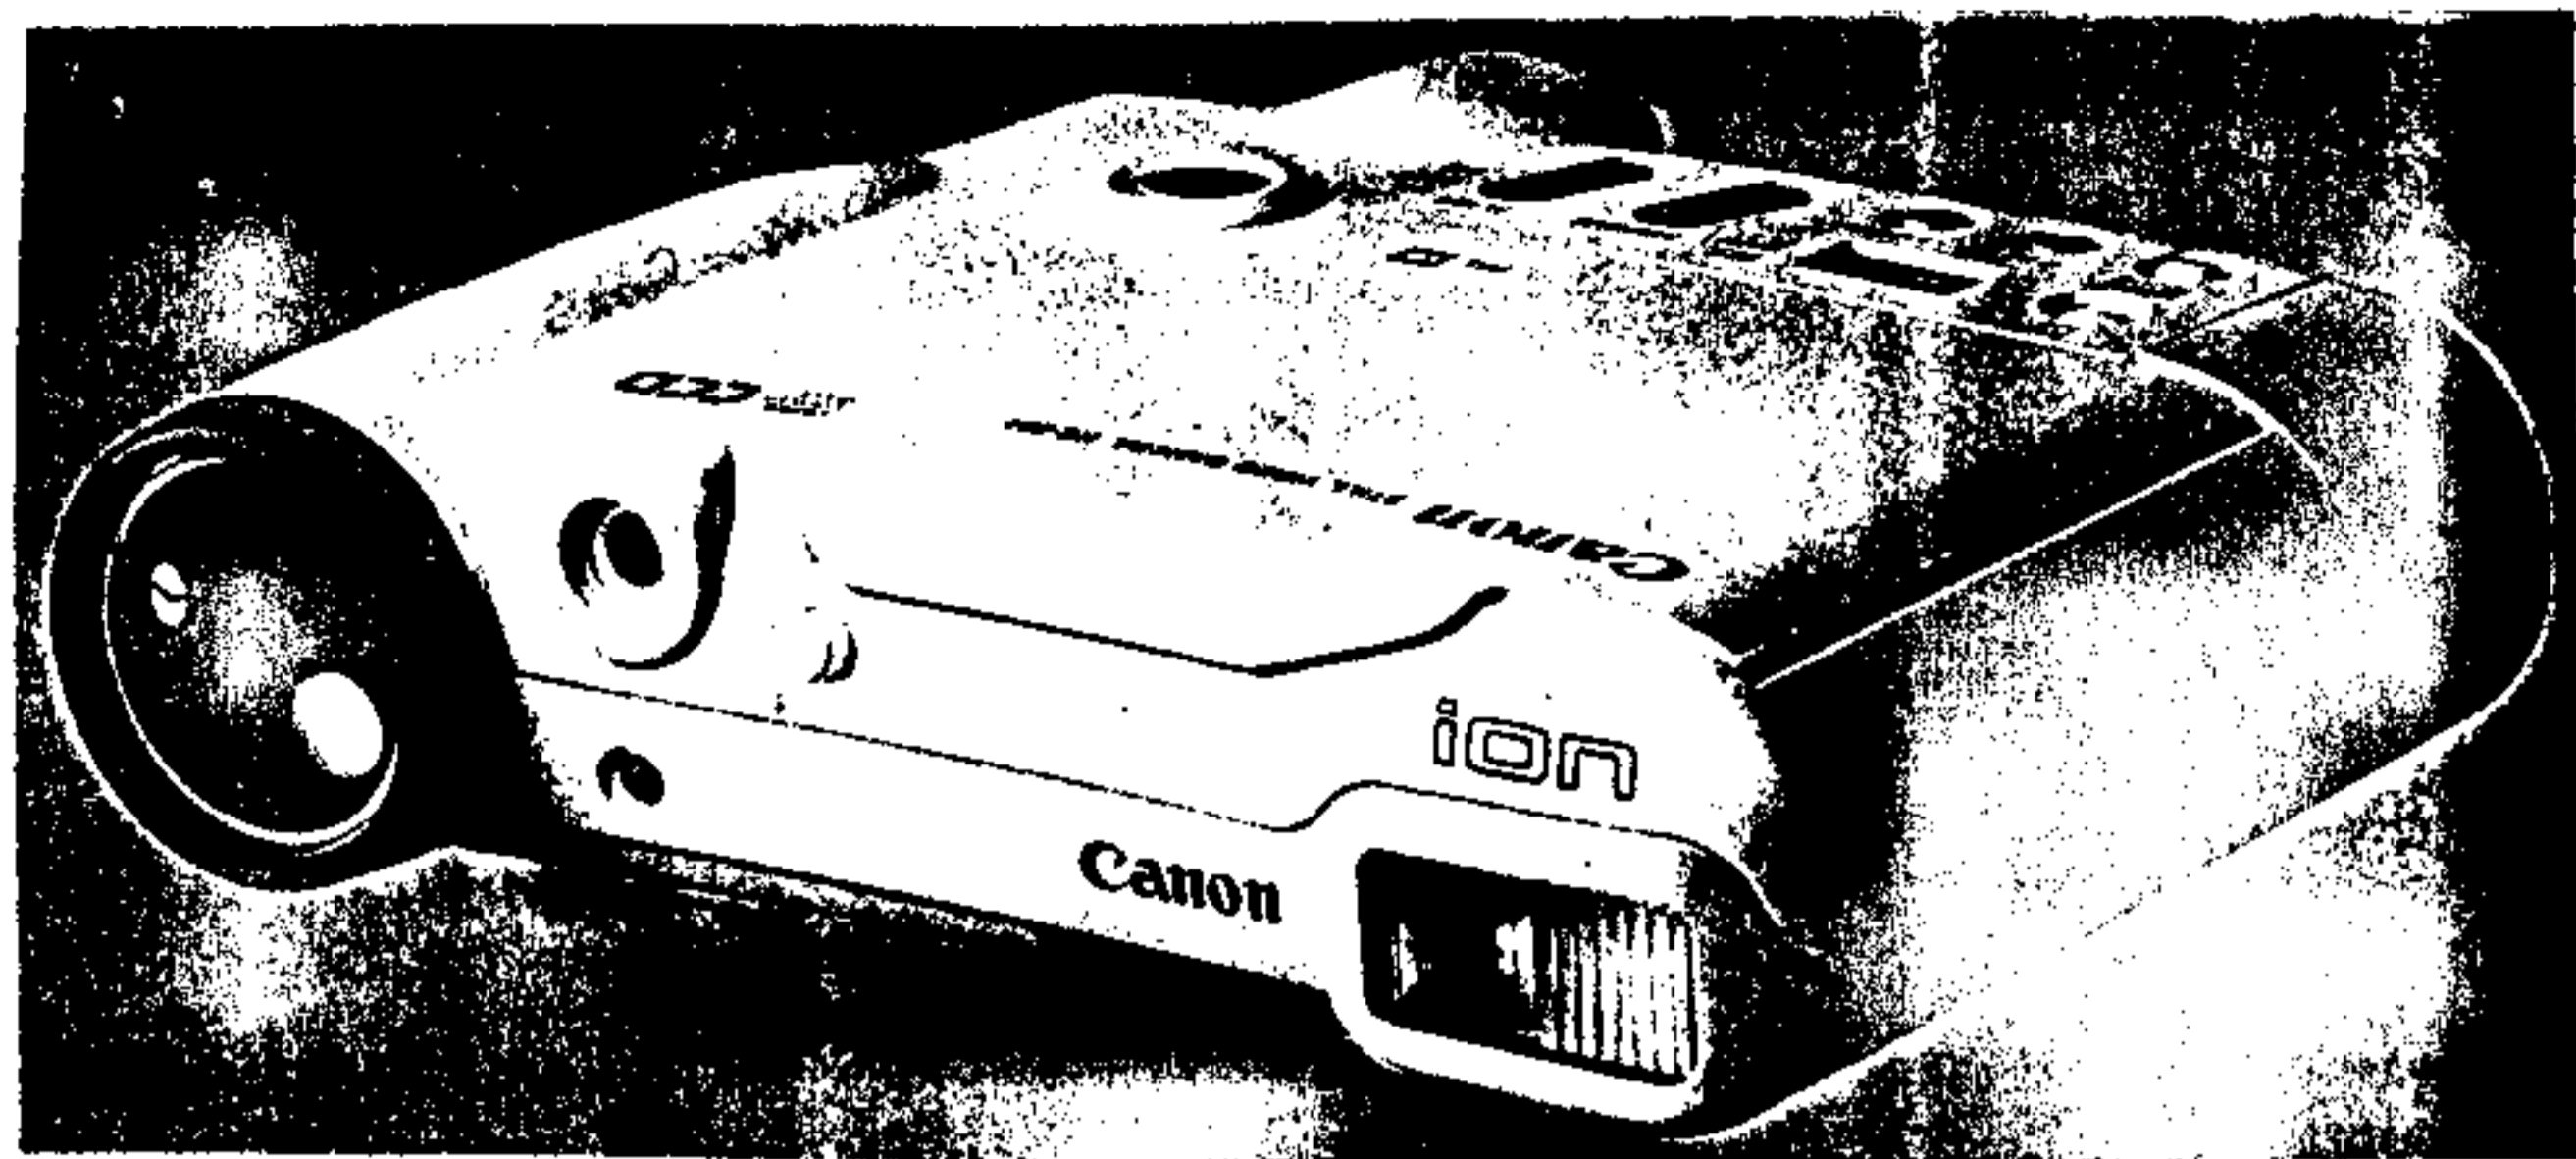

Each game is recorded twice on each track , in case on scratches . If the first one fails to load the computer will automatically wait for the second .

**Will the cd takes the place of the floppy disk ?**

Yes of course if the CD have a success it will but the floppy will still be use for a long time becoz the CD cost really expensive and lot of people have a drive .

## The new ION RC-251 from CANON on the AMIGA :

The world of the camera change as fast as the computer's world. The proof is the new RC-251. After all electronic camera, with autofocus, work out exposure, shutter speed etc, that camera is a real revolution.

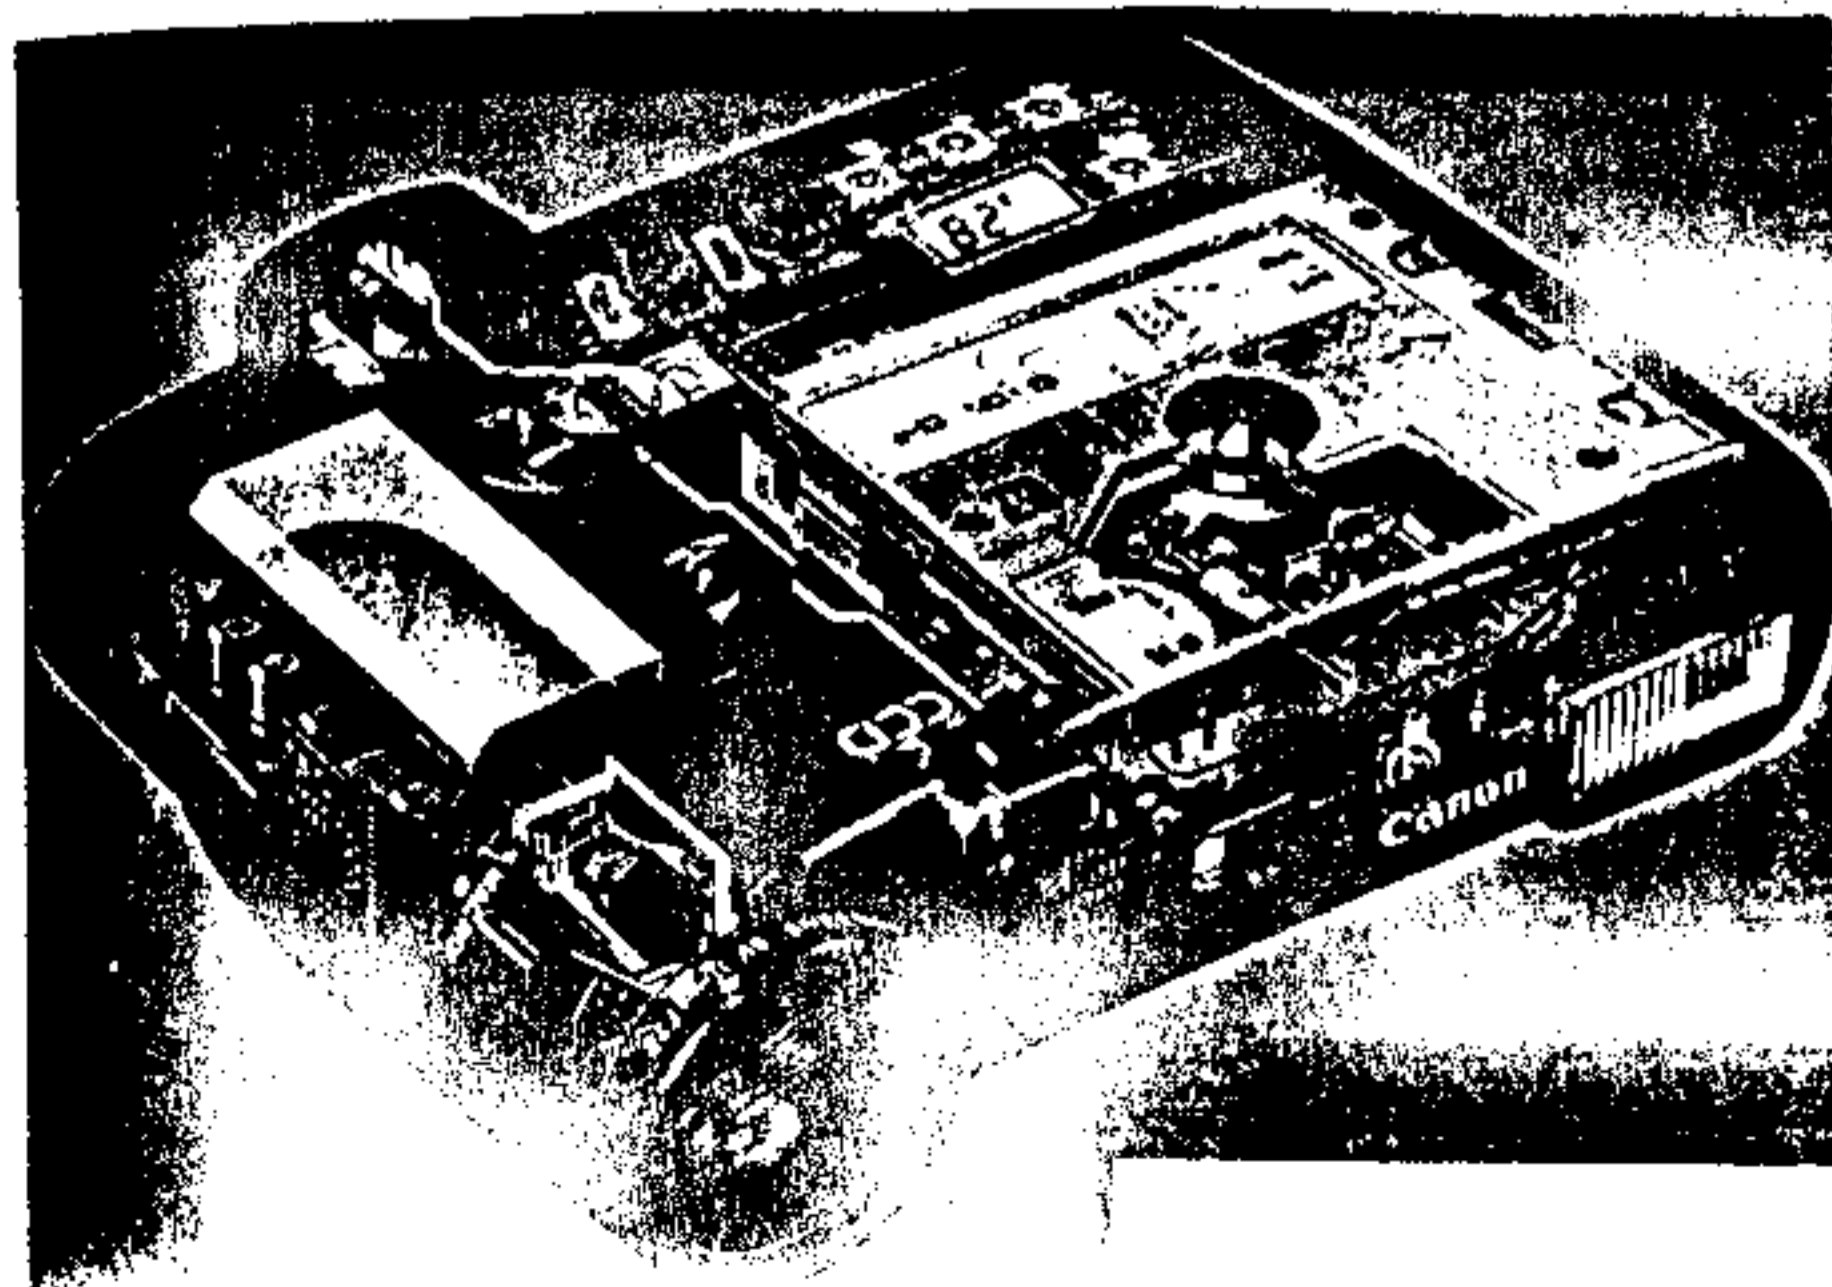

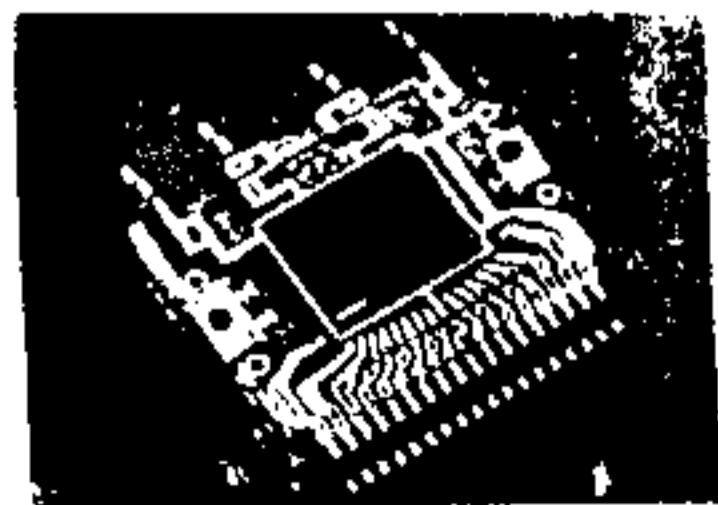

Now comes the digital video who take the place of the familiar film. That technic was developed by CANON 2 years ago to enable pictures, photographs, to be stored on a 2" floppy disk that can be displayed on a conventional TV or monitor. The pic could also be send directly into a printer anywhere in the world. The first model was very expensive : 1000 pounds. But this new model cost only 500 pounds.

The camera could also be connect on an AMIGA trough a digitiser to be use with some programme like the DIGI VIEW.

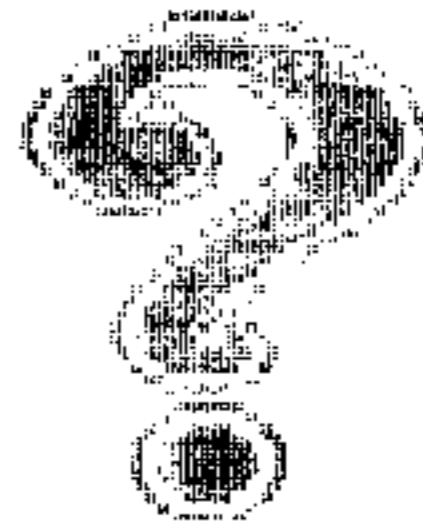

The quality of the image is excellent (look on the right)  
The resolution is 786 pixels horizontally on the AMIGA.  
The advantage is the quality from the pic and we can also scratch one of it if we don't wanna keep it.  
There's also a special macro-stand for the camera which is pre-set to correct focal lenght for the macro switch on the camera. It's also easy coz with it ya can take a shot per second.

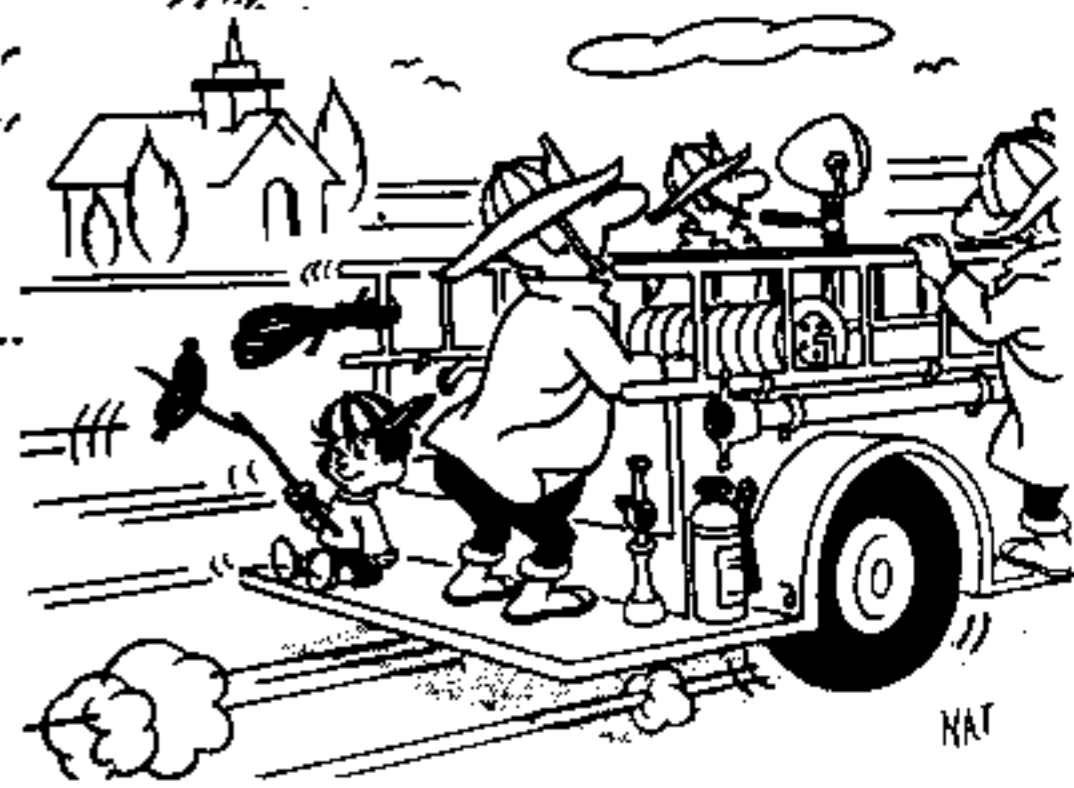

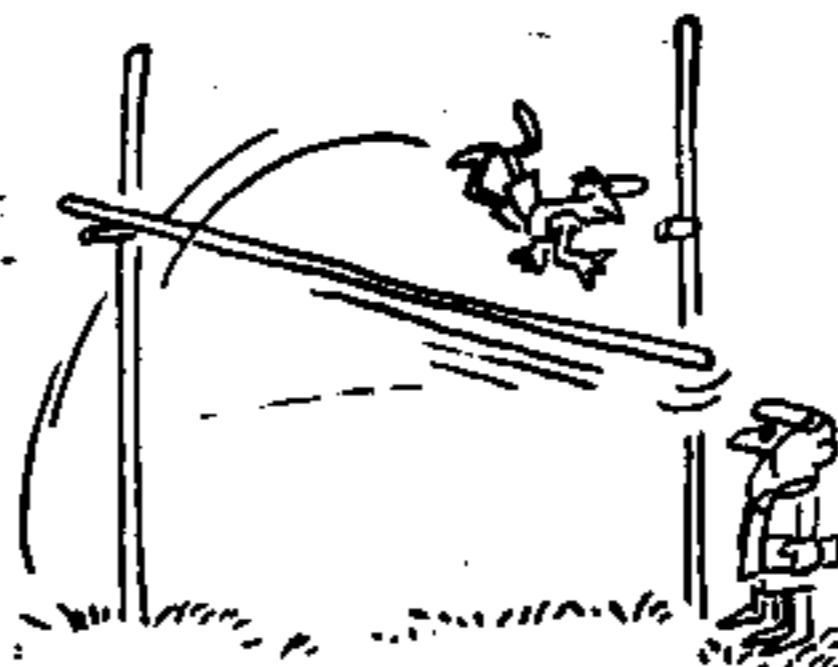

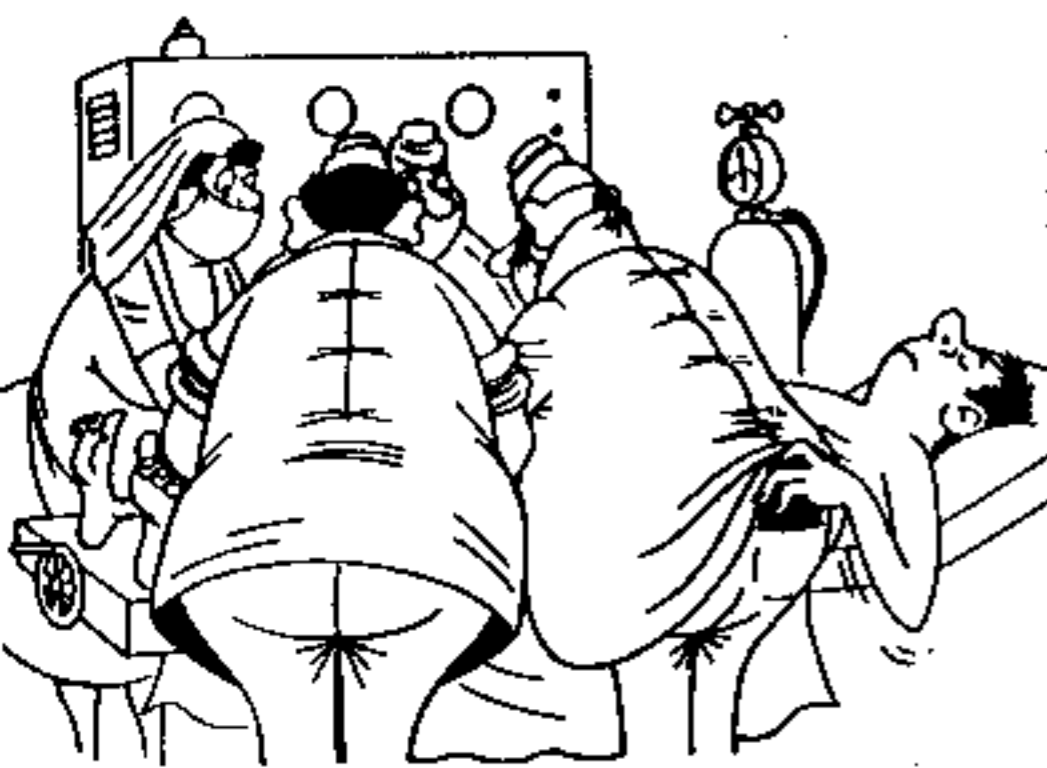

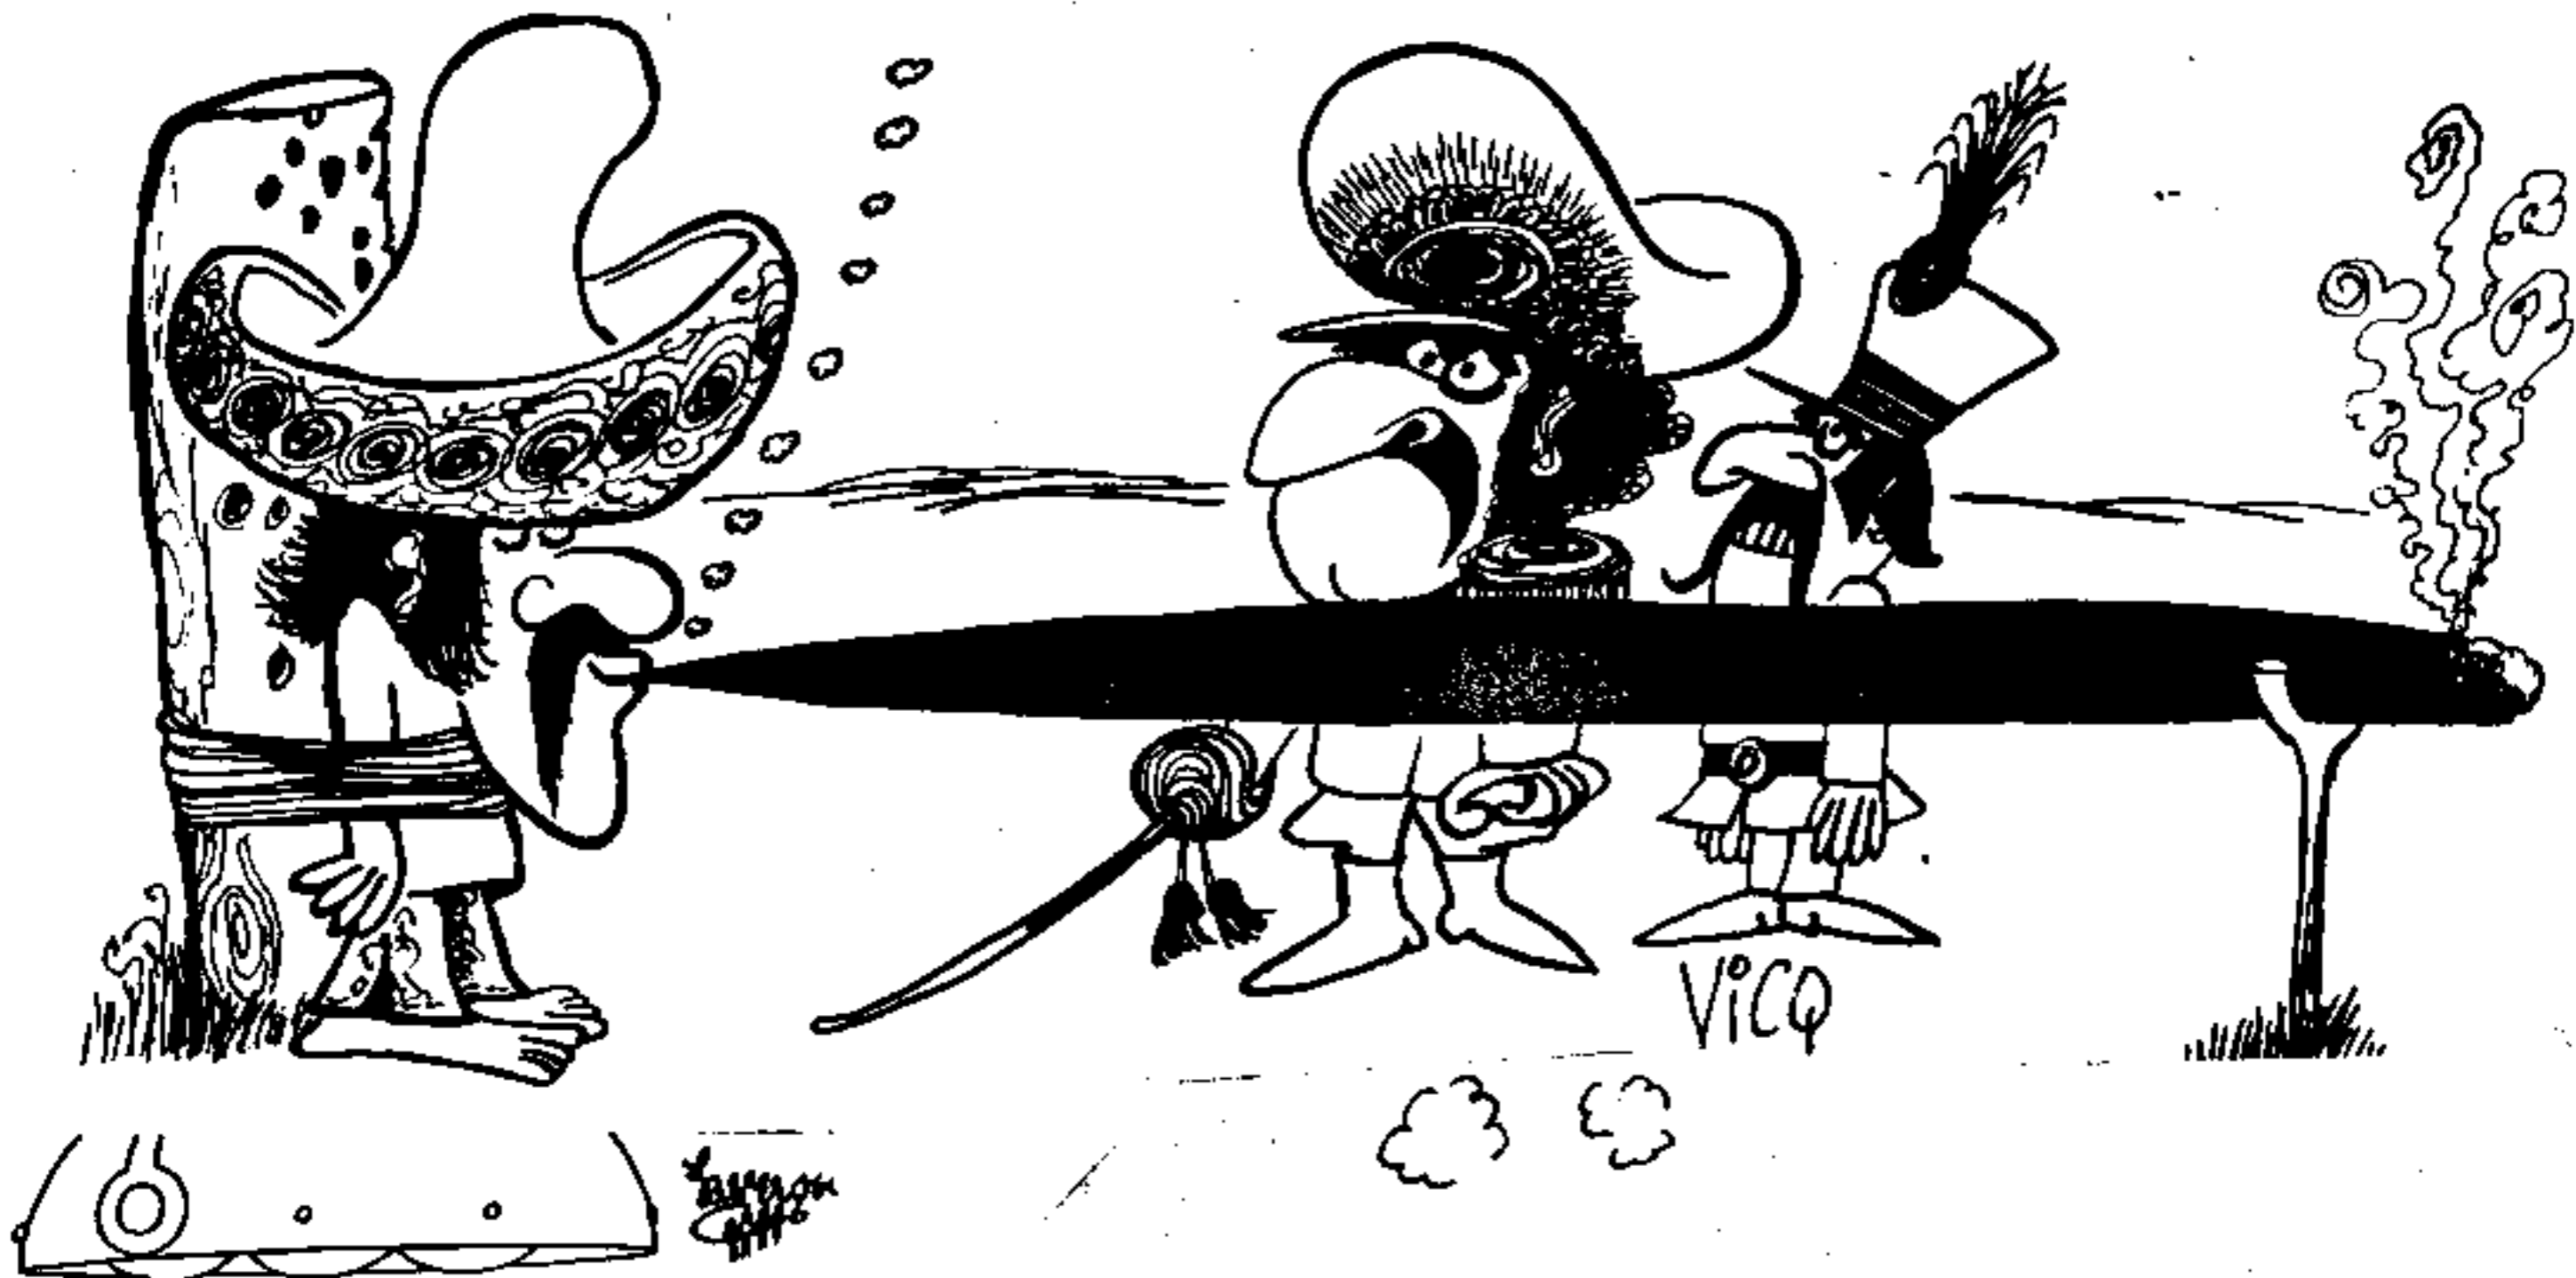

My personal opinion is that it's cool but very expensive.  
A question : will it be a model for the 64 ?
