Hello, this file has been generated in realtime from an Internet Server in ASP to an Acrobat Reader PDF document.

THE ORIGINS OF THE Portable Document Format and the Adobe® Acrobat® product family date to early 1990. At that time, the PostScript® page description language was rapidly becoming the worldwide standard for the production of the printed page. PDF builds on the PostScript page description language by layering a document structure and interactive navigation features on PostScript's under-lying imaging model, providing a convenient, efficient mechanism enabling documents to be reliably viewed and printed anywhere.

From an internet server with ASP you can provide real time Adobe Acrobat document. This component features:

- Paragraphs with 14 standards fonts. [See the font example document](#)
 - **Text any where and using colors**
 - Draw lines, boxes and graphics (Bitmaps, Gifs and JPEG)
 - Page size, left and top properties for paragraphs position
 - Information property
 - Easy to use and fast to generate the PDF document
 - You don't have to install any adobe product on your server to generate the PDF
 - The registered version cost only 50 US dollars per server
